

Welcome to Medisoft Clinical - Key Features

Medisoft Clinical EMR patient Records system is a complete medical records system for Microsoft Windows®. Patient Records is easy to use because it is modeled on paper-based patient records. Medisoft Clinical is adaptable to a wide variety of specialties, from a single-user configuration to a medium medical offices. It is fully integrated, full functional, CCHIT certified, EMR with integrated PMS, LABS, E-prescription, Dictation, POES, Health Maintenance office, to a local area network in a large multi-clinic setting, to a wide area network. The flexibility of Patient Records makes it an ideal choice for growing practices. Patient Records provides many essential features that will help you manage your patient information with ease.

Key features of Medisoft Clinical EMR are:

Meaningful Use Certified

CCHIT Certified for Meaningful use 2 and 3.

Instant Access

Complete patient information is always at your fingertips. For each patient, you can quickly view patient history, progress notes, problem lists, health maintenance information, laboratory data, medications, notes, and more. A unique patient inquiry feature makes it easy to pinpoint information.

Graphic Images

You can use the built-in graphics editor to add or import images into patient notes. You can also quickly draw diagrams or edit medical images from a graphics library.

Health Maintenance Tracking

You can track health maintenance procedures such as immunizations and lab tests, and keep patients up-to-date with reminder notices.

Prescriptions and Drug Interactions

You can submit electronically, write, and print prescriptions automatically as you record medications and dosages. The Drug Interaction database, available on a subscription basis, checks patient medications for drug interactions and allergies.

Prescription Formulary

This feature supports insurance-specific and specialty-specific formularies. It also enables you to select medications by indication.

Report Capabilities

You can create a wide variety of reports for practice analysis, research, recertification, and CME credits. You can also use the unique patient inquiry feature to design report queries, create mailing lists, and produce reminders.

Efficient Data Entry

Patient demographics automatically entered from Medisoft system. You can enter patient information directly with Patient Records' word processing features, or import patient data from a word processor. The Patient Records Text Data Loader transfers information to the appropriate section of the patient chart, including the problem list, vital sign, medication, allergy, and health maintenance categories. Laboratory data can be transferred electronically from an outside laboratory with the Laboratory Data Loader.

Patient Information Analysis

You can use the powerful patient inquiry feature to search for and analyze patient information. You can also export laboratory data, vital signs, medications, allergies, patient demographics, problem lists, visit titles, and health maintenance data to statistical packages, spreadsheets, and databases.

Flow Charts and Plots

You can instantly translate vital signs and laboratory data into a tabular format or display the items graphically, ensuring that the data can be easily read and interpreted.

Integrated Patient Education

You can use the built-in browser to access the optional Patient Education libraries, thousands of informational handouts that you can print and give to your patients.

Built-in Browser for Knowledge Bases and the Web

You can also use the built-in browser to access your own custom local knowledge base, and to surf the Web if you have Web access.

Letters Feature

You can configure templates and macros to automatically include patient demographic, clinical data, and conditional logic in letters. Patient Records supports full-page layout, including fonts, headers, footers, and margins.

Multi-User Capability and Remote Access

You can use Patient Records with your networking software to make records available from several locations at once. With the addition of telecommunications software and a modem, you can access Patient Records from home or hospital. Multiple users may interact concurrently with Medisoft Clinical and may view the same record, clinical document, or template, though the application does not allow multiple users to edit a document or piece of data at the same time. Record-level protection is provided.

Confidentiality and Data Security

You can prevent unauthorized access to patient information with multi-level password protection. You can also safeguard irreplaceable patient data with Patient Records' archiving feature.

Flexibility

You can create your own patient chart sections and develop formats for progress notes, patient histories, and prescription forms. Other options that provide flexibility include renaming laboratory data categories and defining your own health maintenance protocols.

Insurance Billing & Electronic transmission

You can complete the entire Patient billing cycle by using Medisoft billing portion, Electronic claims submission, Electronic payment posting, Patient Insurance verification eligibility, Electronic Patient remainder statement submission.

Usability

You will use simple, straightforward Microsoft Windows commands, menus, and dialog boxes to get your work done. You and your staff will not need extensive prior computer experience or training to get started. Patient Records can be used equally well by small, medium-sized, and very large medical practices. You can use it on a single, standalone PC-compatible computer; a Microsoft® network; or on a combination of standalone and network workstations. These systems may all be in a single location or connected by telecommunications to a remote site. For convenience, you may even want to transfer a copy of selected information to a laptop computer. When choosing the setup for your own office, you will want to consider your equipment budget, the size of your practice, and the size and capabilities of your staff. Whatever your decision, you will still be able to change configurations later as your practice grows.

We are eMDs (Formerly Mc-Kasson) Certified Medisoft Clinical ONE value-added reseller providing solutions, and implementation including computer systems, software, installation, customization, training, support to bring you a peace of mind to go through the transition of the entire system.
